Interagency Edison (iEdison II) Release Notes

Version 2.0.11 – August 26, 2005

Enhancements in this Release

- An enhancement was made to expand the commercial product data to include a flag that will determine whether or not the commercial product is listed on the commercial report. This flag will default to show the commercial product, and the user can change this setting so that the product is not displayed.
- An enhancement was made to expand commercial product data to include the fields "FDA approval number" and "FDA approval type". These fields have a one-to-one relationship with the commercial product. The fields are only required if the user's institution is flagged as requiring these values.
- An enhancement was made to enable NIH staff to enter data (Commercial Product Name and its grant/contract number) that will appear on the commercial report separately from the data reported in the Utilization reports. This data has no relation to currently existing utilization reports or invention reports, as it is completely separate. Any data entered through this method will be displayed on the commercial report, without exception.

Issues Resolved in this Release

- There were no issues resolved in this release.
